

YEAR OF VALUES

STAY HUNGRY

PROVOCATION NO. 7

We keep

moving forward,
opening new doors,
and doing new things,
because we're curious
and curiosity keeps
leading us down new
paths.

- Walt Disney -

CURIOSITY

is a strong desire to learn. It is the driving force for discoveries. At Stable Kernel, curiosity is what makes us adventurers and keeps us staying hungry.

When we are curious, our minds are in an active state, becoming stronger with continual use. This disposition allows us to observe new things, opening us up to a world of endless possibilities.

Let's look at a few tips you can use to ignite your explorer spirit and stay curious.

1. Ask questions.

Make a point to ask questions more. Even if you think they are dumb.

2. Consume content outside of your comfort zone.

When we open
ourselves up to other
subjects outside our
wheelhouse, we
increase our creative
thinking.

3. *Listen fully,
without
judgment.*

This will allow you to
ask meaningful
questions instead of
focusing on your
response.

4. Embrace the unexpected.

Uncertainty
accompanies
intellectual
exploration.

5. *Don't dwell on the past.*

It makes us focus less
on the future.

6. *Change your perspective on a situation.*

This allows you to see
all sides.

7. *Puzzles are cool, but mysteries are better.*

Puzzles have definite answers. Mysteries often depend on a highly complex and interrelated set of factors, both known and unknown. Mysteries open a world of possibilities.
